Package ‘OpenML’

September 21, 2019

Title Open Machine Learning and Open Data Platform

Description We provide an R interface to ‘OpenML.org’ which is an online machine learning platform where researchers can access open data, download and upload data sets, share their machine learning tasks and experiments and organize them online to work and collaborate with other researchers.

The R interface allows to query for data sets with specific properties, and allows the downloading and uploading of data sets, tasks, flows and runs.

See <https://www.openml.org/guide/api> for more information.

**chunkOMLlist**

**Description**

Allows you to do multiple chunked requests with the listOML* functions. The request will be repeated until `total.limit` is reached or until there are no more results available on the server.

**Usage**

```r
chunkOMLlist(listfun, ..., total.limit = 1e+05, chunk.limit = 1000)
```

**Arguments**

- `listfun` (character(1))
  the listing function for which you want to do chunked requests.
- `...` (ANY)
  arguments are passed to the function specified in `listfun`.
- `total.limit` (integer)
  the total limit of results that should be listed. Set this to a high number to get all available results from the server.
- `chunk.limit` (integer)
  the limit for a single request. If you reduce this number, the number of server requests will increase.

**See Also**

Other listing functions: `listOMLDataSetQualities`, `listOMLDataSets`, `listOMLEstimationProcedures`, `listOMLEvaluationMeasures`, `listOMLFlows`, `listOMLRuns`, `listOMLSetup`, `listOMLStudies`, `listOMLTaskTypes`, `listOMLTasks`
clearOMLCache  Clear cache directories

Description
Delete all cached objects and recreate cache directories.

Usage
clearOMLCache()

Examples
# dontrun{
#  clearOMLCache()
# }

configuration  OpenML configuration.

Description
After loading the package, it tries to find a configuration in your home directory. The R command
path.expand("~/.openml/config") gives you the full path to the configuration file on your oper-
ating system.

For further information please read the vignette.

Note
By default the cache directory is located in a temporary directory and the cache will be deleted in
between R sessions. We thus recommend to set the cache directory by hand.

See Also
Other config: getOMLConfig, loadOMLConfig, saveOMLConfig, setOMLConfig
**convertMlrLearnerToOMLFlow**

*Converts an OMLFlow to an mlr learner.*

---

**Description**

Creates an OMLFlow for an mlr Learner. Required if you want to upload an mlr learner to the OpenML server.

**Usage**

```r
convertMlrLearnerToOMLFlow(lrn, name = paste0("mlr.", lrn$id),
                          description = NULL, ...)
```

**Arguments**

- **lrn**
  - [Learner]
  - The mlr learner.

- **name**
  - [character(1)]
  - The name of the flow object. Default is the learner ID with the prefix “mlr” prepended.

- **description**
  - [character(1)]
  - An optional description of the learner. Default is a short specification of the learner and the associated package.

- **...**
  - [any]
  - Further optional parameters that are passed to `makeOMLFlow`.

**Value**

OMLFlow.

---

**convertMlrTaskToOMLDataSet**

*Converts a mlr task to an OpenML data set.*

---

**Description**

Converts a Task to an OMLDataset.

**Usage**

```r
convertMlrTaskToOMLDataSet(task, description = NULL)
```
Arguments

task [Task]
A mlr task.
description [character(1)OMLDataSetDescription]
Either an OMLDataSetDescription or a character(1) that describes the data.
For the latter, all other relevant information is autogenerated from the Task.

Value
OMLDataSet.

See Also
Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

**convertOMLDataSetToMlr**

*Convert an OpenML data set to mlr task.*

Description

Converts an OMLDataSet to a Task.

Usage

convertOMLDataSetToMlr(obj, mlr.task.id = "<oml.data.name>",
task.type = NULL, target = obj$desc$default.target.attribute,
ignore.flagged.attributes = TRUE, drop.levels = TRUE,
fix.colnames = TRUE, verbosity = NULL)

Arguments

obj [OMLDataSet]
The object that should be converted.
mlr.task.id [character(1)]
Id string for Task object. The strings <oml.data.name>, <oml.data.id> and <oml.data.version> will be replaced by their respective values contained in the OMLDataSet object. Default is <oml.data.name>.
task.type [character(1)]
As we only pass the data set, we need to define the task type manually. Possible are: “Supervised Classification”, “Supervised Regression”, “Survival Analysis”. Default is NULL which means to guess it from the target column in the data set. If that is a factor or a logical, we choose classification. If it is numeric we choose regression. In all other cases an error is thrown.
**target**
[character]
The target for the classification/regression task. Default is the `default.target.attribute` of the `OMLDataSetDescription`.

**ignore.flagged.attributes**
[logical(1)]
Should those features that are listed in the data set description slot “ignore.attribute” be removed? Default is TRUE.

**drop.levels**
[logical(1)]
Should empty factor levels be dropped in the data? Default is TRUE.

**fix.colnames**
[logical(1)]
Should colnames of the data be fixed using `make.names`? Default is TRUE.

**verbosity**
[integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via `setOMLConfig`.

**Value**

Task.

**See Also**

Other data set-related functions: `OMLDataSetDescription`, `OMLDataSet`, `convertMlrTaskToOMLDataSet`, `deleteOMLObject`, `getOMLDataSet`, `listOMLDataSets`, `tagOMLObject`, `uploadOMLDataSet`.

**Examples**

```r
# dontrun{
# library("mlr")
# autosOML = getOMLDataSet(data.id = 9)
# autosMlr = convertOMLDataSetToMlr(autosOML)
# }
```

---

**convertOMLFlowToMlr**  
Converts a flow to a mlr learner.

**Description**

Converts an `OMLFlow` that was originally created with the OpenML R-package to a `Learner`.

**Usage**

`convertOMLFlowToMlr(flow)`
convertOMLMlrRunToBMR

Arguments

flow
[OMLFlow]  
The flow object.

Value

Learner

See Also

Other flow-related functions: deleteOMLObject, getOMLFlow, listOMLFlows, makeOMLFlowParameter, makeOMLFlow, tagOMLObject

convertOMLMlrRunToBMR  Convert OMLMlrRuns to a BenchmarkResult.

Description

Converts one or more OMLMlrRuns to a BenchmarkResult.

Usage

convertOMLMlrRunToBMR(...)

Arguments

...  [OMLMlrRun]  
One or more OMLMlrRuns

Value

BenchmarkResult

See Also

Other run-related functions: convertOMLRunToBMR, deleteOMLObject, getOMLRun, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun
**convertOMLRunToBMR**  
_Convert an OpenML run set to a benchmark result for mlr._

**Description**

Converts an OMLRun to a BenchmarkResult.

**Usage**

```r
convertOMLRunToBMR(run, measures = run$task.evaluation.measure,
                     recompute = FALSE)
```

**Arguments**

- **run**  
  [OMLRun]  
  The run that should be converted.

- **measures**  
  [character]  
  Character describing the measures (see listOMLEvaluationMeasures) that will be converted into mlr measures and are then used in the BenchmarkResult. Currently, not all measures from OpenML can be converted into mlr measures.

- **recompute**  
  [logical(1)]  
  Should the measures be recomputed with mlr using the predictions? Currently recomputing is not supported.

**Value**

BenchmarkResult.

**See Also**

Other run-related functions: convertOMLMlrRunToBMR, deleteOMLObject, getOMLRun, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun

---

**convertOMLTaskToMlr**  
_Convert an OpenML task to mlr._

**Description**

Converts an OMLTask to a list of Task, ResampleInstance and Measure.

**Usage**

```r
convertOMLTaskToMlr(obj, measures = NULL,
                     mlr.task.id = "<oml.data.name>",
                     ignore.flagged.attributes = TRUE,
                     drop.levels = TRUE, verbosity = NULL)
```
Arguments

- **obj** [OMLTask]
  The OML task object that should be converted.

- **measures** [Measure]
  Additional measures that should be computed.

- **mlr.task.id** [character(1)]
  Id string for Task object. The strings <oml.data.name>, <oml.data.id>, <oml.data.version> and <oml.task.id> will be replaced by their respective values contained in the OMLTask object. Default is <oml.data.name>.

- **ignore.flagged.attributes** [logical(1)]
  Should those features that are listed in the data set description slot “ignore.attribute” be removed? Default is TRUE.

- **drop.levels** [logical(1)]
  Should empty factor levels be dropped in the data? Default is TRUE.

- **verbosity** [integer(1)]
  Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via setOMLConfig.

Value

A list with the following objects:

- **mlr.task** [Task]
- **mlr.rin** [ResampleInstance]
- **mlr.measures** [list of Measures to optimize for]

See Also

Other task-related functions: deleteOMLObject, getOMLTask, listOMLTaskTypes, listOMLTasks, makeOMLTask, tagOMLObject

Examples

```r
# dontrun(
# library("mlr")
# vinnieOML = getOMLTask(task.id = 4845)
# vinnieMlr = convertOMLTaskToMlr(vinnieOML)
# )
```
deleteOMLObject

Delete an OpenML object.

Description

This will delete one of your uploaded datasets, tasks, flows or runs. Note that you can only delete the objects you uploaded.

Usage

deleteOMLObject(id, object = c("data", "task", "flow", "run", "study"), verbosity = NULL)

Arguments

id [integer(1)]
The ID of the respective object.

object [character(1)]
A character that specifies the object you want to delete from the server. Can be either "data", "task", "flow" or "run".

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

See Also

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

Other task-related functions: convertOMLTaskToMlr, getOMLTask, listOMLTaskTypes, listOMLTasks, makeOMLTask, tagOMLObject

Other flow-related functions: convertOMLFlowToMlr, getOMLFlow, listOMLFlows, makeOMLFlowParameter, makeOMLFlow, tagOMLObject

Other run-related functions: convertOMLMlrRunToBMR, convertOMLRunToBMR, getOMLRun, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun
**extractOMLStudyIds**  
*Extract IDs of an OMLStudy object*

**Description**
Extracts either all `data.id`s, `task.id`s, `flow.id`s or `run.id`s from an OMLStudy object.

**Usage**
```
extractOMLStudyIds(object, type, chunk.size = 400)
```

**Arguments**
- `object` [OMLStudy]
The OMLStudy object.
- `type` [character(1)]
A character that specifies which IDs should be extracted from the study. Can be either "data.id", "task.id", "flow.id" or "run.id".
- `chunk.size` [integer(1)]
If the number of IDs to be returned exceeds "chunk.size", a list of IDs is returned. Each list element contains not more than "chunk.size" elements. Default is 400.

**Value**
numeric.

---

**getCachedOMLDataSetStatus**  
*Check status of cached datasets.*

**Description**
The caching mechanism is fine, but sometimes you might want to work on a dataset, which is already cached and has been deactivated in the meanwhile. This function can be used to determine the status of all cached datasets.

**Usage**
```
getCachedOMLDataSetStatus(show.warnings = TRUE, ...)
```

**Arguments**
- `show.warnings` [logical(1)]
  Show warning if there are deactivated datasets in cache? Default is TRUE.
- `...`
  Arguments passed to `listOMLDataSets`
getOMLConfig

Value
data.frame

Examples

# \dontrun{
# getCachedOMLDataSetStatus()
# }

getOMLConfig

Get OpenML configuration.

Description

Returns a list of OpenML configuration settings.

Usage

getOMLConfig()

Value

list of current configuration variables with class “OMLConfig”.

See Also

Other config: configuration, loadOMLConfig, saveOMLConfig, setOMLConfig

Examples

getOMLConfig()

getOMLDataSet

Get an OpenML data set.

Description

Given a data set ID, the corresponding OMLDataSet will be downloaded (if not in cache) and returned.

Note that data splits and other task-related information are not included in an OMLDataSet. Tasks can be downloaded with getOMLTask.

Usage

getOMLDataSet(data.id = NULL, data.name = NULL, data.version = NULL, 
cache.only = FALSE, verbosity = NULL)
getOMLDataSet

Arguments

data.id [integer(1)]
ID of the data set.
data.name [character(1)]
Data set name. This is an alternative to data.id. Default is NULL.
data.version [integer(1)]
Version number of the data set with name data.name. Default is NULL. Ignored if data.id is passed.
cache.only [logical(1)]
Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.
verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value

OMLDataSet.

Note

One of data.id or data.name must be passed.

See Also

Other downloading functions: getOMLDataSetQualities, getOMLFlow, getOMLRun, getOMLStudy, getOMLTask
Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, listOMLDataSets, tagOMLObject, uploadOMLDataSet

Examples

# \dontrun{
# dat = getOMLDataSet(data.id = 9)
#
# # this object contains the data ($data)
# # and meta information
# str(dat, 1)
# summary(dat$data)
# }

getOMLDataSetQualities

List available OpenML qualities with values for given data set.

Description

The returned data.frame contains data set quality “name”s and values “value”.

Usage

getOMLDataSetQualities(data.id, verbosity = NULL, name = NULL)

Arguments

data.id [integer(1)]
ID of the data set.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

name [character]
Returns only the data qualities from “name” (see also listOMLDataSetQualities).
Default is NULL and uses all available data qualities.

Value

data.frame.

See Also

Other downloading functions: getOMLDataSet, getOMLFlow, getOMLRun, getOMLStudy, getOMLTask

Examples

# \dontrun{
# a = getOMLDataSetQualities(data.id = 9)
# a[aname == "number.of.missing.values", ]
# getOMLDataSetQualities(data.id = 9, name = "number.of.missing.values")
# }
getOMLFlow  

**Description**

Given an flow id, the corresponding **OMLFlow** is downloaded if not already available in cache.

**Usage**

```r
getOMLFlow(flow.id, cache.only = FALSE, verbosity = NULL)
```

**Arguments**

- `flow.id` \[integer(1)\]
  
  ID of the implementation of an OpenML flow.

- `cache.only` \[logical(1)\]
  
  Only try to retrieve the object from cache. Will result in error if the object is not found. Default is `FALSE`.

- `verbosity` \[integer(1)\]
  
  Print verbose output on console? Possible values are:  
  0: normal output,  
  1: info output,  
  2: debug output.  
  Default is set via `setOMLConfig`.

**Value**

**OMLFlow**.

**See Also**

Other downloading functions: `getOMLDataSetQualities`, `getOMLDataSet`, `getOMLRun`, `getOMLStudy`, `getOMLTask`

Other flow-related functions: `convertOMLFlowToMlr`, `deleteOMLObject`, `listOMLFlows`, `makeOMLFlowParameter`, `makeOMLFlow`, `tagOMLObject`

**Examples**

```r
# \dontrun{
# r_ctree = getOMLFlow(flow.id = 2569)
# weka_bagging = getOMLFlow(flow.id = 2286)
# }
```
getOMLRun

Description

Given an run id, the corresponding OMLRun including all server and user computed metrics is downloaded if not already available in cache.

Usage

getOMLRun(run.id, cache.only = FALSE, only.xml = FALSE, verbosity = NULL)

Arguments

run.id [integer(1)]
The run ID.
cache.only [logical(1)]
Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.
only.xml [logical(1)]
Should only the XML be downloaded?
verbosity [integer(1)]
Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via setOMLConfig.

Value

OMLRun.

See Also

Other downloading functions: getOMLDataSetQualities, getOMLDataSet, getOMLFlow, getOMLStudy, getOMLTask
Other run-related functions: convertOMLMlrRunToBMR, convertOMLRunToBMR, deleteOMLObject, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun

Examples

# dontrun(
# runs_ctree = listOMLRuns(flow.id = 2569)
# run1 = getOMLRun(run.id = runs_ctree$run.id[1])
# str(run1, 1)
# )
getOMLRunParList  
 Extract OMLRunParList from run

Description
Extracts the seed information as OMLRunParList from a OMLRun.

Usage
getOMLRunParList(run)

Arguments
run  [OMLRun]
A OMLRun

Value
OMLRunParList

getOMLSeedParList  
 Extract OMLSeedParList from run

Description
Extracts the seed information as OMLSeedParList from a OMLRun.

Usage
getOMLSeedParList(run)

Arguments
run  [OMLRun]
A OMLRun

Value
OMLSeedParList
**getOMLStudy**

*Get OpenML Study information.*

**Description**

A OpenML study is a collection of OpenML objects with a specific tag defined by the user (i.e. "study_X"). If you create a study through the website [https://www.openml.org/new/study](https://www.openml.org/new/study), you can also specify an alias which can be used to access the study.

**Usage**

```r
getOMLStudy(study = NULL, verbosity = NULL)
```

**Arguments**

- **study**
  
  [numeric(1)]|character(1)]
  
  Either the id or the alias of a study.

- **verbosity**
  
  [integer(1)]
  
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via `setOMLConfig`.

**Value**

`OMLStudy`.

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling `forget` on the function manually.

**See Also**

Other downloading functions: `getOMLDataSetQualities`, `getOMLDataSet`, `getOMLFlow`, `getOMLRun`, `getOMLTask`
getOMLTask

Get an OpenML task.

Description

Given a task ID, the corresponding OMLTask will be downloaded (if not in cache) and returned.

Usage

getOMLTask(task.id, cache.only = FALSE, verbosity = NULL)

Arguments

- **task.id** [integer(1)]
  Task ID.

- **cache.only** [logical(1)]
  Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.

- **verbosity** [integer(1)]
  Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via setOMLConfig.

Value

OMLTask.

See Also

Other downloading functions: getOMLDataSetQualities, getOMLDataSet, getOMLFlow, getOMLRun, getOMLStudy

Other task-related functions: convertOMLTaskToMlr, deleteOMLObject, listOMLTaskTypes, listOMLTasks, makeOMLTask, tagOMLObject

Examples

```r
# Download task and access relevant information to start running experiments
\dontrun{
  # task = getOMLTask(1)
  # task
  # task$task.type
  # task$input$data.set
  # head(task$input$data.set$data)
  # }
```
listOMLDataSetQualities

List available OpenML qualities names.

Description

The returned data.frame contains quality name “name”.

Usage

listOMLDataSetQualities(verbosity = NULL)

Arguments

verbos[200]ity  [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

See Also

Other listing functions: chunkOMLlist,listOMLDataSets,listOMLEstimationProcedures,listOMLEvaluationMeasures,listOMLFlows,listOMLRuns,listOMLSetup,listOMLStudies,listOMLTaskTypes,listOMLTasks

Examples

# \dontrun{
# listOMLDataSetQualities()
# }
listOMLDataSets  

*List the first 5000 OpenML data sets.*

**Description**

The returned data.frame contains the data set id “data.id”, the “status” (“active”, “deactivated”, “in.preparation”) and describing data qualities. Note that by default only the first 5000 data sets will be returned (due to the argument “limit = 5000”).

**Usage**

```r
listOMLDataSets(number.of.instances = NULL, number.of.features = NULL,
number.of.classes = NULL, number.of.missing.values = NULL,
tag = NULL, data.name = NULL, limit = 5000, offset = NULL,
status = "active", verbosity = NULL)
```

**Arguments**

- `number.of.instances`  
  `[numeric(1) | numeric(2)]`  
  If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

- `number.of.features`  
  `[numeric(1) | numeric(2)]`  
  If not NULL, it subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given range.

- `number.of.classes`  
  `[numeric(1) | numeric(2)]`  
  If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

- `number.of.missing.values`  
  `[numeric(1) | numeric(2)]`  
  If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

- `tag`  
  `[character]`  
  If not NULL only entries with the corresponding tags are listed.

- `data.name`  
  `[character(1)]`  
  Name of the data set.

- `limit`  
  `[numeric(1)]`  
  Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.

- `offset`  
  `[numeric(1)]`  
  Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
status [character]
Subsets the results according to the status. Possible values are ("active","deactivated","in_preparation"). Default is "active".

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, tagOMLObject, uploadOMLDataSet

Examples

# \dontrun{
# datasets = listOMLDataSets()
# tail(datasets)
# }

listOMLEstimationProcedures

List available estimation procedures.

Description
The returned data.frame contains the est.id and the corresponding name of the estimation procedure.

Usage

listOMLEstimationProcedures(verbosity = NULL)
listOMLEvaluationMeasures

Arguments

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

See Also
Other listing functions: chunkOMLlist, listOMLDataSetQualities, listOMLDataSets, listOMLEvaluationMeasures, listOMLFlows, listOMLRuns, listOMLSetup, listOMLStudies, listOMLTaskTypes, listOMLTasks

Examples

# dontrun(
# listOMLEstimationProcedures()
# )

---

listOMLEvaluationMeasures

List available OpenML evaluation measures.

Description

The names of all evaluation measures which are used in at least one run are returned in a data.frame.

Usage

listOMLEvaluationMeasures(verbosity = NULL)
listOMLFlows

Arguments

 verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame.

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first
call will query the server and store the results in memory while the second and all subsequent calls
will return the cached results from the first call. You can reset the cache by calling forget on the
function manually.

Other listing functions: chunkOMLlist, listOMLDataSetQualities, listOMLDataSets, listOMLEstimationProcedures,
listOMLFlows, listOMLRuns, listOMLSetup, listOMLStudies, listOMLTaskTypes, listOMLTasks

Examples

# \dontrun{
# listOMLEvaluationMeasures()
# }

Description

The returned data.frame contains the flow id “fid”, the flow name (“full.name” and “name”), ver-
sion information (“version” and “external.version”) and the uploader (“uploader”) of all registered
OpenML flows.

Usage

listOMLFlows(tag = NULL, limit = NULL, offset = NULL,
 verbosity = NULL)
Arguments

tag [character]
If not NULL only entries with the corresponding tags are listed.

limit [numeric(1)]
Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.

offset [numeric(1)]
Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame .

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

See Also
Other listing functions: chunkOMLlist, listOMLDataSetQualities, listOMLDataSets, listOMLEstimationProcedures, listOMLEvaluationMeasures, listOMLRuns, listOMLSetup, listOMLStudies, listOMLTaskTypes, listOMLTasks
Other flow-related functions: convertOMLFlowToMlr, deleteOMLObject, getOMLFlow, makeOMLFlowParameter, makeOMLFlow, tagOMLObject

Examples

# \dontrun{
# flows = listOMLFlows()
# tail(flows)
# }
listOMLRunEvaluations  List run results of a task.

Description

Retrieves all run results for task(s) (task.id), flow(s) (flow.id) run(s) (run.id) or uploaders(s) (uploader.id) and returns a data.frame. Each row contains, among others, the run id “rid”. Alternatively the function can be passed a single tag to list only runs with the corresponding tag associated.

Usage

listOMLRunEvaluations(task.id = NULL, flow.id = NULL, run.id = NULL, uploader.id = NULL, tag = NULL, limit = NULL, offset = NULL, verbosity = NULL, evaluation.measure = NULL, show.array.measures = FALSE, extend.flow.name = TRUE)

Arguments

task.id [integer]
a single ID or a vector of IDs of the task(s).

flow.id [integer]
a single ID or a vector of IDs of the flow(s).

run.id [integer]
a single ID or a vector of IDs of the run(s).

uploader.id [integer]
a single ID or a vector of IDs of uploader profile(s).

tag [character]
If not NULL only entries with the corresponding tags are listed.

limit [numeric(1)]
Optional. The maximum number of entries to return. Without specifying offset, it returns the first ‘limit’ entries. Setting limit = NULL returns all available entries.

offset [numeric(1)]
Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.
evaluation.measure
    [character(1)]
    Use this to speedup your request. It restricts the results to only one evalua-
    tion measure (see listOMLEvaluationMeasures for possible values). Default
    is NULL, which means that no restriction is going to happen and all possible
    evaluation measures will be returned.
show.array.measures
    [logical(1)]
    Should measures that return an array instead of a single skalar value be shown
    (e.g. confusion matrix, predictive accuracy within each class)? Default is FALSE.
extend.flow.name
    [logical(1)]
    Adds a column flow.version that refers to the version number of the flow and
    a column flow.source containing the prefix of the flow that specifies the source
    of the flow (i.e. weka, R) and a column learner.name that refers to the learner.
    Default is TRUE.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first
call will query the server and store the results in memory while the second and all subsequent calls
will return the cached results from the first call. You can reset the cache by calling forget on the
function manually.

Examples

# \dontrun{
# # get run results of task 6 (as many rows as runs for this task)
# rev_tid6 = listOMLRunEvaluations(task.id = 6L)
# str(rev_tid6)
#
# # get run results of run 8 (one row)
# rev_rid8 = listOMLRunEvaluations(run.id = 8)
# str(rev_rid8)
# }

listOMLRuns  List the first 5000 OpenML runs.

Description
This function returns information on all OpenML runs that match certain task.id(s), run.id(s),
flow ID flow.id and/or uploader.id(s). Alternatively the function can be passed a single tag to
list only runs with the corresponding tag associated. Note that by default only the first 5000 runs
will be returned (due to the argument "limit = 5000").
listOMLRuns

Usage
listOMLRuns(task.id = NULL, flow.id = NULL, run.id = NULL, uploader.id = NULL, tag = NULL, limit = 5000, offset = NULL, verbosity = NULL)

Arguments

- **task.id** [integer]
  a single ID or a vector of IDs of the task(s).

- **flow.id** [integer]
  a single ID or a vector of IDs of the flow(s).

- **run.id** [integer]
  a single ID or a vector of IDs of the run(s).

- **uploader.id** [integer]
  a single ID or a vector of IDs of uploader profile(s).

- **tag** [character]
  If not NULL only entries with the corresponding tags are listed.

- **limit** [numeric(1)]
  Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.

- **offset** [numeric(1)]
  Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.

- **verbosity** [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via setOMLConfig.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

See Also
Other listing functions: chunkOMLlist, listOMLDataSetQualities, listOMLDataSets, listOMLEstimationProcedures, listOMLEvaluationMeasures, listOMLFlows, listOMLSetup, listOMLStudies, listOMLTaskTypes, listOMLTasks
Other run-related functions: convertOMLrirRunToBMR, convertOMLRunToBMR, deleteOMLObject, getOMLRun, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun

Examples

```r
# dontrun{
# runs_ctree = listOMLRuns(flow.id = 2569)
# head(runs_ctree)
# }
```

listOMLSetup

List hyperparameter settings

Description

Each run has a setup.id, i.e. an ID for the hyperparameter settings of the flow that produced the run. This function allows the listing of hyperparameter settings.

Usage

```r
listOMLSetup(setup.id = NULL, flow.id = NULL, limit = 1000, offset = NULL, verbosity = NULL)
```

Arguments

- `setup.id` [integer(1)]
  - ID of the setup (which is basically an ID for the parameter configuration).
- `flow.id` [integer(1)]
  - ID of the implementation of an OpenML flow.
- `limit` [numeric(1)]
  - Optional. The maximum number of entries to return. Without specifying `offset`, it returns the first `limit` entries. Setting `limit = NULL` returns all available entries.
- `offset` [numeric(1)]
  - Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no `limit` is given.
- `verbosity` [integer(1)]
  - Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via `setOMLConfig`.

Value

data.frame.
Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling `forget` on the function manually.

Examples

```r
# dontrun{
#   listOMLSetup(limit = 1)
#}
```

listOMLStudies

`list OpenML Studies.`

Description

Retrives a list of available studies.

Usage

```r
listOMLStudies(main.entity.type = NULL, status = "all", uploader.id = NULL, limit = NULL, offset = NULL, verbosity = NULL)
```

Arguments

- `main.entity.type` [character]
  Whether a collection of runs (study) or collection of tasks (benchmark suite) should be returned. Subsets the results according to the entity type. Possible values are `NULL`, "task", "run"). Default is `NULL` which means that no subsetting is done.

- `status` [character]
  Subsets the results according to the status. Possible values are "active", "deactivated", "in_preparation". Default is "active".

- `uploader.id` [integer]
  a single ID or a vector of IDs of uploader profile(s).
limit [numeric(1)]
Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.

offset [numeric(1)]
Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

listOMLTasks

List the first 5000 OpenML tasks.

Description
The returned data.frame contains the task_id, the data set id data.id, the status and some describing data qualities. Note that by default only the first 5000 data sets will be returned (due to the argument “limit = 5000”).

Usage
listOMLTasks(task.type = NULL, estimation.procedure = NULL, evaluation.measures = NULL, number.of.instances = NULL, number.of.features = NULL, number.of.classes = NULL, number.of.missing.values = NULL, tag = NULL, data.name = NULL, data.tag = NULL, limit = 5000, offset = NULL, status = "active", verbosity = NULL)
Arguments

- **task.type** ([character(1)])
  If not NULL, only tasks belonging to the given task type are listed. Use `listOMLTaskTypes()`$name to see possible values for task.type. The default is NULL, which means that tasks with all available task types are listed.

- **estimation.procedure** ([character])
  If not NULL, only tasks belonging to the given estimation procedures are listed. Use `listOMLEstimationProcedures()`$name to see possible values for estimation.procedure. The default is NULL, which means that tasks with all available estimation procedures are listed.

- **evaluation.measures** ([character])
  If not NULL, only tasks belonging to the given evaluation measures are listed. Use `listOMLEvaluationMeasures()`$name to see possible values for evaluation.measures. The default is NULL, which means that tasks with all available evaluation measures are listed.

- **number.of.instances** ([numeric(1) | numeric(2)])
  If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

- **number.of.features** ([numeric(1) | numeric(2)])
  If not NULL, it subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given range.

- **number.of.classes** ([numeric(1) | numeric(2)])
  If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

- **number.of.missing.values** ([numeric(1) | numeric(2)])
  If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

- **tag** ([character])
  If not NULL, only entries with the corresponding tags are listed.

- **data.name** ([character(1)])
  Name of the data set.

- **data.tag** ([character(1)])
  Refers to the tag of the dataset the task is based on. If not NULL only tasks with the corresponding data.tag are listed.

- **limit** ([numeric(1)])
  Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.

- **offset** ([numeric(1)])
  Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
listOMLTaskTypes

status [character]
Subsets the results according to the status. Possible values are "active", "deactivated", "in_preparation". Default is "active".

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Other task-related functions: convertOMLTaskToMlr, deleteOMLObject, getOMLTask, listOMLTaskTypes, makeOMLTask, tagOMLObject

Examples

# \dontrun{
# tasks = listOMLTasks()
# head(tasks)
# }

listOMLTaskTypes List available OpenML task types.

Description
The returned data.frame contains the type id and the character name of the OpenML task type.

Usage
listOMLTaskTypes(verbosity = NULL)
loadOMLConfig

Arguments

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
data.frame.

Note
This function is memoised. I.e., if you call this function twice in a running R session, the first
call will query the server and store the results in memory while the second and all subsequent calls
will return the cached results from the first call. You can reset the cache by calling forget on the
function manually.

listOMLTasks
Other task-related functions: convertOMLTaskToMlr, deleteOMLObject, getOMLTask, listOMLTasks,
makeOMLTask, tagOMLObject

Examples

# \dontrun{
#   listOMLTaskTypes()
# }

loadOMLConfig Load OpenML configuration.

Description
Loads the OpenML config file from the disk and overwrites the current OpenML config. If there is
no API key in the configuration file, the key is retrieved from the environment variable “OPENM-
LAPIKEY” (if defined).

Usage
loadOMLConfig(path = "~/openml/config", assign = TRUE)
Arguments

path [character(1)]
   Full path location of the config file to be loaded.

assign [logical(1)]
   Use the loaded configuration as the current configuration? If set to FALSE, the configuration is just returned by the function. Default is TRUE.

Value

list of current configuration variables with class “OMLConfig”.

See Also

Other config: configuration, getOMLConfig, saveOMLConfig, setOMLConfig

Examples

# # if assign = FALSE nothing is changed
# # usually one would want assign = TRUE
# \dontrun{
#   loadOMLConfig(assign = FALSE)
# }

makeOMLFlow

Construct OMLFlow.

Description

More details about the elements of a OMLFlow can be found in the XSD scheme.

Usage

Arguments

flow.id [integer(1)]
ID of the flow. Generated by the server, based on name and version of the flow.
Ignored when uploaded manually.

uploader [integer(1)]
The user that uploaded the flow. Added by the server. Ignored when uploaded manually.

name [character(1)]
The name of the flow. Name-version combinations should be unique.
Allowed characters: () [] a-z A-Z 0-9 . _ - +

version [character(1)]
The version of the flow. Default is 1.0. Ignored at upload time.

external.version [character(1)]
An external version, defined by the user. In combination with the name, it must be unique.

description [character(1)]
A user description of the flow.

creator [character]
Optional. The persons/institutions that created the flow.

contributor [character]
Optional. (Minor) contributors to the workflow

upload.date [character(1)]
The date on which the flow was uploaded.
Format YYYY-mm-ddThh:MM:SS. Added by the server. Ignored when uploaded manually.

licence [character(1)]
Optional. Default is none, meaning Public Domain or "don't know/care".

language [character(1)]
Optional. Starts with one upper case letter, rest is lower case. Default is English.

full.description [character(1)]
Optional. Full description of the workflow, e.g., man pages filled in by tool. This may include information about all components of the workflow.

installation.notes [character(1)]
Optional. Additional hints on how to run the flow.

dependencies [character(1)]
Optional. The dependencies of the flow.

bibliographical.reference [list]
An optional list containing information on bibliographical references in form of OMLBibRef.
A list containing \texttt{OMLFlows}. Typically components of a workflow or subfunctions of an algorithm (e.g. kernels). Components can have their own parameters.

- **qualities** [list] Qualities of the algorithm. Each member of the list is an \texttt{OMLFlowQuality}.

- **tags** [character] Tags describing the algorithm.

- **source.url** [character(1)] URL from which the source code can be downloaded. Added by the server. Ignored when uploaded manually.

- **binary.url** [character(1)] URL from which the binary can be downloaded. Added by the server. Ignored when uploaded manually.

- **source.format** [character(1)] Format of the source file.

- **binary.format** [character(1)] Format of the binary file.

- **source.md5** [character(1)] MD5 checksum to check if the source code was uploaded correctly.

- **binary.md5** [character(1)] MD5 checksum to check if the binary code was uploaded correctly.

- **source.path** [character(1)] The path to the cached source file, once \texttt{getOMLFlow} was run.

- **binary.path** [character(1)] The path to the cached binary file, once \texttt{getOMLFlow} was run.

- **object** [any] (optional) Any R object referring to the flow.

\textbf{See Also}

Other flow-related functions: \texttt{convertOMLFlowToMlr}, \texttt{deleteOMLObject}, \texttt{getOMLFlow}, \texttt{listOMLFlows}, \texttt{makeOMLFlowParameter}, \texttt{tagOMLObject}
Construct OMLRun.

Description

More details about the elements of a OMLRun can be found in the XSD scheme.

Usage

```r
makeOMLRun(run.id = NA_integer_, uploader = NA_integer_,
            uploader.name = NA_character_, task.id, task.type = NA_character_,
            task.evaluation.measure = NA_character_, flow.id = NA_integer_,
            flow.name = NA_character_, setup.id = NA_integer_,
            setup.string = NA_character_, error.message = NA_character_,
            parameter.setting = list(), tags = NA_character_,
            predictions = NULL, input.data = makeOMLIOData(),
            output.data = makeOMLIOData())
```

Arguments

- **run.id**: [numeric(1)]
  - ID of the run. Added by server. Ignored when uploading a run.

- **uploader**: [numeric(1)]
  - ID of the user that uploaded the run. Added by server. Ignored when uploading a run.

- **uploader.name**: [character(1)]
  - Name of the user that uploaded the run. Ignored when uploading a run.

- **task.id**: [numeric(1)]
  - ID of the task that is solved in this run. This ID is given in the task description.

- **task.type**: [character(1)]
  - Task type of the run. See `listOMLTaskTypes` for all possible types.

- **task.evaluation.measure**: [character(1)]
  - Evaluation measure used in the run.

- **flow.id**: [character(1)]
  - ID of the flow used to solve the task. Returned by the API when you upload the flow, or given in the flow description when you download an existing flow.

- **flow.name**: [character(1)]
  - Name of the flow.

- **setup.id**: [numeric(1)]
  - Unique ID of the used setup. Ignored when uploading a run (i.e., it will be searched based on the parameter settings).

- **setup.string**: [character(1)]
  - The CLI string that can invoke the learner with the correct parameter settings. This argument is optional.
makeOMLRunParList

Construct OMLRunParList.

Description

Generate a list of OpenML run parameter settings for a given mlr learner.

Usage

makeOMLRunParList(mlr.lrn, component = NA_character_)

Arguments

mlr.lrn [Learner]
The mlr learner.

component [character]
If the learner is a (sub-)component of a flow, this component’s name.

Value

A OMLRunParList which is a list of OMLRunParameters.
makeOMLSeedParList

Construct OMLSeedParList

Description

Generate a list of OpenML seed parameter settings for a given seed.

Usage

makeOMLSeedParList(seed, prefix = "openml")

Arguments

- **seed**: numeric(1)
  The seed.
- **prefix**: character
  prefix for seed parameter names.

Value

A OMLSeedParList which is a list of OMLRunParameters that provide only information about the seed.

makeOMLStudy

OMLStudy.

Description

If you create a study through the website https://www.openml.org/new/study, you can also specify an alias which can be used to access the study. To see a full list of all elements, please see the XSD.

Usage

makeOMLStudy(alias, name, description, data.id = NULL, task.id = NULL, flow.id = NULL, run.id = NULL)

Arguments

- **alias**: character
  The alias of the study.
- **name**: character
  The name of the study.
- **description**: character
  The description of the study.
data.id [integer]
A vector of IDs of the data sets to be included in the study.

task.id [integer]
A vector of IDs of the tasks to be included in the study.

flow.id [integer]
A vector of IDs of the flows to be included in the study.

run.id [integer]
A vector of IDs of the runs to be included in the study.

Value
OMLStudy.

See Also
Other uploading functions: uploadOMLDataSet, uploadOMLFlow, uploadOMLRun, uploadOMLStudy

makeOMLTask
Construct OMLTask.

Description
More details about the elements of a OMLTask can be found in the XSD scheme.

Usage
makeOMLTask(task.id, task.type, input, parameters = list(), output, tags = NA_character_)

Arguments

task.id [integer(1)]
The ID of this task. Generated by the API.

task.type [character(1)]
The task type of this task. Task types can be browsed and created on the OpenML website. See also listOMLTaskTypes for a list of all available tasks.

input [list]
The inputs given for this task (i.e. data.set, estimation.procedure, evaluation.measures, cost.matrix).

parameters [list]
Parameter settings for this task (depends on the task type).

output [list]
Outputs expected after running this task.

tags [character]
Optional tags describing the (data of the) task.
**Description**

An OMLDataSet consists of an OMLDataSetDescription, a data.frame containing the data set, the old and new column names and, finally, the target features.

The OMLDataSetDescription provides information on the data set, like the ID, name, version, etc. To see a full list of all elements, please see the XSD.

The slot colnames.old contains the original names, i.e., the column names that were uploaded to the server, while colnames.new contains the names that you will see when working with the data in R. Most of the time, old and new column names are identical. Only if the original names are not valid, the new ones will differ.

The slot target.features contains the column name(s) from the data.frame of the OMLDataSet that refer to the target feature(s).

**Usage**

```r
makeOMLDataSet(desc, data, colnames.old = colnames(data),
               colnames.new = colnames(data), target.features = NULL)
```

**Arguments**

- **desc** [OMLDataSetDescription]
  Data set description.

- **data** [data.frame]
  The data set.

- **colnames.old** [character]
  Names of the features that were uploaded to the server.

- **colnames.new** [character]
  Names of the features that are displayed.

- **target.features** [character]
  Name(s) of the target feature(s). If set, this will replace the default target in desc.

**Value**

OMLDataSet

Other data set-related functions: `OMLDataSetDescription`, `convertMlrTaskToOMLDataSet`, `convertOMLDataSetToMlr`, `deleteOMLObject`, `getOMLDataSet`, `listOMLDataSets`, `tagOMLObject`, `uploadOMLDataSet`

Examples

```r
data("airquality")
dsc = "Daily air quality measurements in New York, May to September 1973. This data is taken from R."
desc_airquality = makeOMLDataSetDescription(name = "airquality",
  description = dsc,
  creator = "New York State Department of Conservation (ozone data) and the National Weather Service (meteorological data)",
  collection.date = "May 1, 1973 to September 30, 1973",
  language = "English",
  licence = "GPL-2",
  default.target.attribute = "Ozone",
  citation = cit,
  tags = "R")

airquality_oml = makeOMLDataSet(desc = desc_airquality,
  data = airquality,
  colnames.old = colnames(airquality),
  colnames.new = colnames(airquality),
  target.features = "Ozone")
```

OMLDataSetDescription  Construct OMLDataSetDescription.

Description

Creates a description for an OMLDataSet. To see a full list of all elements, please see the XSD.

Usage

```r
makeOMLDataSetDescription(id = 0L, name, version = "0", description,
  format = "ARFF", creator = NA_character_,
  contributor = NA_character_, collection.date = NA_character_,
  upload.date = as.POSIXct(Sys.time()), language = NA_character_,
  licence = NA_character_, url = NA_character_,
  default.target.attribute = NA_character_,
  row.id.attribute = NA_character_, ignore.attribute = NA_character_,
  version.label = NA_character_, citation = NA_character_,
  visibility = NA_character_, original.data.url = NA_character_,
  paper.url = NA_character_, update.comment = NA_character_,
  md5.checksum = NA_character_, status = NA_character_,
  tags = NA_character_)
```
### Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>integer(1)</td>
<td>Data set ID, autogenerated by the server. Ignored when set manually.</td>
</tr>
<tr>
<td>name</td>
<td>character(1)</td>
<td>The name of the data set.</td>
</tr>
<tr>
<td>version</td>
<td>character(1)</td>
<td>Version of the data set, autogenerated by the server. Ignored when set manually.</td>
</tr>
<tr>
<td>description</td>
<td>character(1)</td>
<td>Description of the data set, given by the uploader.</td>
</tr>
<tr>
<td>format</td>
<td>character(1)</td>
<td>Format of the data set. At the moment this is always &quot;ARFF&quot;.</td>
</tr>
<tr>
<td>creator</td>
<td>character</td>
<td>The person(s), that created this data set. Optional.</td>
</tr>
<tr>
<td>contributor</td>
<td>character</td>
<td>People, that contributed to this version of the data set (e.g., by reformatting). Optional.</td>
</tr>
<tr>
<td>collection.date</td>
<td>character(1)</td>
<td>The date the data was originally collected. Given by the uploader. Optional.</td>
</tr>
<tr>
<td>upload.date</td>
<td>POSIXt</td>
<td>The date the data was uploaded. Added by the server. Ignored when set manually.</td>
</tr>
<tr>
<td>language</td>
<td>character(1)</td>
<td>Language in which the data is represented. Starts with 1 upper case letter, rest lower case, e.g. 'English'</td>
</tr>
<tr>
<td>licence</td>
<td>character(1)</td>
<td>Licence of the data. NA means: Public Domain or &quot;don’t know/care&quot;.</td>
</tr>
<tr>
<td>url</td>
<td>character(1)</td>
<td>Valid URL that points to the data file.</td>
</tr>
<tr>
<td>default.target.attribute</td>
<td>character</td>
<td>The default target attribute, if it exists. Of course, tasks can be defined that use another attribute as target.</td>
</tr>
<tr>
<td>row.id.attribute</td>
<td>character(1)</td>
<td>The attribute that represents the row-id column, if present in the data set. Else NA.</td>
</tr>
<tr>
<td>ignore.attribute</td>
<td>character</td>
<td>Attributes that should be excluded in modelling, such as identifiers and indexes. Optional.</td>
</tr>
<tr>
<td>version.label</td>
<td>character(1)</td>
<td>Version label provided by user, something relevant to the user. Can also be a date, hash, or some other type of id.</td>
</tr>
</tbody>
</table>
OMLDataSetDescription

citation [character(1)]
Reference(s) that should be cited when building on this data.

visibility [character(1)]
Who can see the data set. Typical values: 'Everyone’, 'All my friends’, 'Only me’. Can also be any of the user’s circles.

original.data.url [character(1)]
For derived data, the url to the original data set. This can be an OpenML data set, e.g. 'http://openml.org/d/1'.

paper.url [character(1)]
Link to a paper describing the data set.

update.comment [character(1)]
When the data set is updated, add an explanation here.

md5.checksum [character(1)]
MD5 checksum to check if the data set is downloaded without corruption. Can be ignored by user.

status [character(1)]
The status of the data set, autogenerated by the server. Ignored when set manually.

tags [character]
Optional tags for the data set.

See Also
Other data set-related functions: OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

Examples

data("airquality")
dsc = "Daily air quality measurements in New York, May to September 1973. This data is taken from R."

airquality_oml = makeOMLDataSet(desc = desc_airquality, data = airquality, colnames.old = colnames(airquality),
populateOMLCache

colnames.new = colnames(airquality),
target.features = "Ozone"

populateOMLCache

Download a bunch of OpenML objects to cache.

Description

Given a set of OML object ids, the function populates the cache directory by downloading the corresponding objects. This can avoid network access in later experiments, as you can retrieve all objects from the cache on disk. This is of particular interest in highly parallel computations on a cluster with a shared file system.

Usage

populateOMLCache(data.ids = integer(0L), task.ids = integer(0L),
flow.ids = integer(0L), run.ids = integer(0L), verbosity = NULL,
overwrite = FALSE)

Arguments

data.ids [integer]
Dataset IDs. Default is none.

task.ids [integer]
Task IDs. Default is none.

flow.ids [integer]
Flow IDs. Default is none.

run.ids [integer]
Run IDs. Default is none.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

overwrite [integer(1)]
Should files that are already in cache be overwritten?

Value

invisible(NULL)
runTaskFlow

**Description**

Uses the ID of the run and tries to reproduce its results by downloading the flow and applying it to the respective task.

**Usage**

```r
runTaskFlow(task, flow, par.list, seed = 1, predict.type = NULL,
             verbosity = NULL, models = TRUE)
```

**Arguments**

- **task**: [OMLTask]
  An OpenML task.
- **flow**: [OMLFlow]
  Flow that is applied to the Task.
- **par.list**: [list|OMLRunParList]
  Can be either a named list containing the hyperparameter values or a OMLRunParList.
- **seed**: [numeric(1)|OMLSeedParList]
  Set a seed to make the run reproducible. Default is 1 and sets the seed using set.seed(1).
- **predict.type**: [character(1)]
  Optional. See setPredictType. Default is "response".
- **verbosity**: [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via setOMLConfig.
- **models**: [logical(1)]
  This argument is passed to benchmark. Should all fitted models be stored in the ResampleResult? Default is TRUE.

**Value**

OMLMlrRun, an OMLRun.
**runTaskMlr**

Run mlr learner on OpenML task.

**Description**

Run task with a specified learner from mlr and produce predictions. By default, the evaluation measure contained in the task is used.

**Usage**

```r
runTaskMlr(task, learner, measures = NULL, verbosity = NULL, seed = 1, scimark.vector = NULL, models = TRUE, ...)
```

**Arguments**

- `task` [OMLTask]
  An OpenML task.
- `learner` [Learner]
  Learner from package mlr to run the task.
- `measures` [Measure]
  Additional measures that should be computed.
- `verbosity` [integer(1)]
  Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via `setOMLConfig`.
- `seed` [numeric(1)|OMLSeedParList]
  Set a seed to make the run reproducible. Default is 1 and sets the seed using `set.seed(1)`.
- `scimark.vector` [numeric(6)]
  Optional vector of performance measurements computed by the scientific Scimark benchmark. May be computed using the `rscimark` R package. Default is NULL, which means no performance measurements.
- `models` [logical(1)]
  This argument is passed to `benchmark`. Should all fitted models be stored in the `ResampleResult`? Default is `TRUE`.
- `...` [any]
  Further arguments that are passed to `convertOMLTaskToMlr`.

**Value**

- `list` Named list with the following components:
  - `run` The OMLRun object.
  - `bmr` Benchmark result returned by `benchmark`.
  - `flow` The generated OMLFlow object.
saveOMLConfig

Saves a list of OpenML configuration settings to file.

Description

The new configuration is automatically assigned via `setOMLConfig` if all checks pass. If you don’t set a certain option, package defaults will be inserted into the file.

Usage

```r
saveOMLConfig(server = NULL, verbosity = NULL, apikey = NULL,
               cachedir = NULL, arff.reader = NULL, confirm.upload = NULL,
               overwrite = FALSE)
```

Arguments

- `server` [character(1)] URL of the XML API endpoint.
- `verbosity` [integer(1)] Verbosity level. Possible values are 0 (normal output), 1 (info output), 2 (debug output).
- `apikey` [character(1)] Your OpenML API key. Log in to OpenML, move to your profile to get it.
- `cachedir` [character(1)] Path to the cache directory.
- `arff.reader` [character(1)] Name of the package which should be used to parse arff files. Possible are “RWeka”, which is the default and “farff”.
- `confirm.upload` [logical(1)] Should the user be asked for confirmation before upload of OML objects?
- `overwrite` [logical(1)] Should an existing file be overwritten? Default is FALSE.

See Also

getOMLTask, makeLearner

Examples

```r
# dontrun{
# library(mlr)
# ## run a single flow (learner) on a single task
# task = getOMLTask(57)
# lrn = makeLearner("classif.rpart")
# res = runTaskMlr(task, lrn)
# ## the result "res" is a list, storing information on the actual "run", the
# ## corresponding benchmark result "bmr" and the applied "flow"
# }
```
setOMLConfig

See Also
Other config: configuration, getOMLConfig, loadOMLConfig, setOMLConfig

setOMLConfig
Setter for configuration settings.

Description
Set and overwrite configuration settings.

Usage
setOMLConfig(server = NULL, verbosity = NULL, apikey = NULL, cachedir = NULL, arff.reader = NULL, confirm.upload = NULL)

Arguments

  server [character(1)]
  URL of the XML API endpoint.

  verbosity [integer(1)]
  Verbosity level. Possible values are 0 (normal output), 1 (info output), 2 (debug output).

  apikey [character(1)]
  Your OpenML API key. Log in to OpenML, move to your profile to get it.

  cachedir [character(1)]
  Path to the cache directory.

  arff.reader [character(1)]
  Name of the package which should be used to parse arff files. Possible are “RWeka”, which is the default and “farff”.

  confirm.upload [logical(1)]
  Should the user be asked for confirmation before upload of OML objects?

Value
Invisibly returns a list of configuration settings.

See Also
Other config: configuration, getOMLConfig, loadOMLConfig, saveOMLConfig
Tagging of OpenML objects

Description

Add or remove a specific tag to a OpenML data, task, flow or run.

Usage

```r
tagOMLObject(ids, object = c("data", "task", "flow", "run"), tags, verbosity = NULL)
untagOMLObject(ids, object = c("data", "task", "flow", "run"), tags, verbosity = NULL)
```

Arguments

- `ids` [integer]
  The IDs of the respective objects.
- `object` [character(1)]
  A character that specifies the object you want to delete from the server. Can be either "data", "task", "flow" or "run".
- `tags` [character]
  The tags that should be added/removed.
- `verbosity` [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via `setOMLConfig`.

uploadOMLDataSet

Upload a data set to the OpenML server.

Description
Share a data set by uploading it to the OpenML server.

Usage

uploadOMLDataSet(x, tags = NULL, description = NULL,
confirm.upload = NULL, verbosity = NULL)

Arguments

x
[Task][OMLDataSet]
Contains the data set that should be uploaded.

tags
[character]
The tags that should be added after uploading.

description
[character(1)][OMLDataSetDescription]
Either an OMLDataSetDescription or a character(1) that describes the data.
For the latter, all other relevant information is autogenerated from the Task.

confirm.upload
[logical(1)]
Should the user be asked to confirm the upload? Default is the setting from your
config.

verbosity
[integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

Value
invisible(numeric(1)). The ID of the data (data.id).

Note
This function will reset the cache of listOMLDataSets on success.

See Also

Other uploading functions: makeOMLStudy, uploadOMLFlow, uploadOMLRun, uploadOMLStudy
Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet,
convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject
**Description**

Share a flow by uploading it to the OpenML server.

**Usage**

```
uploadOMLFlow(x, tags = NULL, verbosity = NULL,
               confirm.upload = NULL, sourcefile = NULL, binaryfile = NULL)
```

**Arguments**

- **x**  
  [OMLFlow|Learner]
  The flow that should be uploaded.

- **tags**  
  [character]
  The tags that should be added after uploading.

- **verbosity**  
  [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,  
  1: info output,  
  2: debug output.
  Default is set via `setOMLConfig`.

- **confirm.upload**  
  [logical(1)]
  Should the user be asked to confirm the upload? Default is the setting from your config.

- **sourcefile**  
  [character(1)]
  The file path to the flow (not needed for Learner).

- **binaryfile**  
  [character(1)]
  The file path to the flow (not needed for Learner).

**Value**

`invisible(numeric)` The ID of the flow (flow.id).

**Note**

This function will reset the cache of `listOMLFlows` on success.

**See Also**

Other uploading functions: `makeOMLStudy`, `uploadOMLDataSet`, `uploadOMLRun`, `uploadOMLStudy`
**uploadOMLRun**  
*Upload an OpenML run.*

**Description**

Share a run of a flow on a given OpenML task by uploading it to the OpenML server.

**Usage**

```r
uploadOMLRun(run, upload.bmr = FALSE, tags = NULL,  
confirm.upload = NULL, verbosity = NULL, ...)  
```

**Arguments**

- **run**  
  The run that should be uploaded. Either an `OMLRun` or a run created with `OMLMlrRun`.

- **upload.bmr**  
  [logical(1)]
  Should the Benchmark result created by `benchmark` function be uploaded? If set to `TRUE` and the flow is created via `makeTuneWrapper`, an arff file that contains the hyperparameter optimization trace is also uploaded.

- **tags**  
  [character]
  The tags that should be added after uploading.

- **confirm.upload**  
  [logical(1)]
  Should the user be asked to confirm the upload? Default is the setting from your `config`.

- **verbosity**  
  [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via `setOMLConfig`.

- **...**  
  Not used.

**Value**

`invisible(numeric(1))`. The run ID.

**Note**

This function will reset the cache of `listOMLRuns` and `listOMLRunEvaluations` on success.

By default you will be asked to confirm the upload. You can deactivate the need for confirmation by setting “confirm.upload = TRUE” via `setOMLConfig` or set the corresponding argument each time you call the function.
### uploadOMLStudy

**Description**

A OpenML study is a collection of OpenML objects. If you create a study through the website [https://www.openml.org/new/study](https://www.openml.org/new/study), you can also specify an alias which can be used to access the study.

**Usage**

```r
uploadOMLStudy(x, confirm.upload = NULL, verbosity = NULL)
```

**Arguments**

- `x` `OMLStudy` Contains the study information that should be uploaded.
- `confirm.upload` `logical(1)` Should the user be asked to confirm the upload? Default is the setting from your config.
- `verbosity` `integer(1)` Print verbose output on console? Possible values are:
  - 0: normal output,
  - 1: info output,
  - 2: debug output.
  Default is set via `setOMLConfig`.

**Value**

`OMLStudy`.

**See Also**

Other uploading functions: `makeOMLStudy`, `uploadOMLDataSet`, `uploadOMLFlow`, `uploadOMLRun`
uploadOMLTask

**Description**

Share a task by uploading it to the OpenML server.

**Usage**

```r
uploadOMLTask(task.type, data.id, target.feature, estimation.procedure, 
    evaluation.measure = NULL, tags = NULL, description = NULL, 
    confirm.upload = NULL, verbosity = NULL)
```

**Arguments**

- `task.type` [character(1)]
  The type of the task to upload. See listOMLTaskTypes() to list all valid task types.
- `data.id` [integer(1)]
  ID of the data set.
- `target.feature` [character(1)]
  The target feature of the dataset.
- `estimation.procedure` [character(1)]
  The estimation procedure for the evaluation. See listOMLEstimationProcedures() to list all procedures.
- `evaluation.measure` [character(1)]
  The evaluation measure for the evaluation. See listOMLEvaluationMeasures() to list all possible measures.
- `tags` [character]
  The tags that should be added after uploading.
- `description` [character(1)]
  Either an `OMLDataSetDescription` or a character(1) that describes the data. For the latter, all other relevant information is autogenerated from the Task.
- `confirm.upload` [logical(1)]
  Should the user be asked to confirm the upload? Default is the setting from your config.
- `verbosity` [integer(1)]
  Print verbose output on console? Possible values are:
  0: normal output,
  1: info output,
  2: debug output.
  Default is set via setOMLConfig.
