

# Package ‘graphTweets’

August 8, 2018

**Type** Package

**Title** Visualise Twitter Interactions

**Version** 0.4.3

**Date** 2018-08-07

**Description** Allows building an edge table from data frame of tweets,  
also provides function to build nodes and another create a temporal graph.

**License** MIT + file LICENSE

**Depends** R (>= 3.2.0)

**Imports** dplyr, igraph, rtweet, purrr, magrittr, utils, tidyr, zeallot,  
combinat

**RoxygenNote** 6.0.1

**URL** <http://graphTweets.john-coene.com>

**BugReports** <https://github.com/JohnCoene/graphTweets/issues>

**Suggests** testthat, knitr, rmarkdown

**NeedsCompilation** no

**Author** John Coene [aut, cre]

**Maintainer** John Coene <jcoenep@gmail.com>

**Repository** CRAN

**Date/Publication** 2018-08-07 22:30:03 UTC

## R topics documented:

gt_collect . . . . .	2
gt_dyn . . . . .	2
gt_edges . . . . .	3
gt_graph . . . . .	5
gt_nodes . . . . .	5
gt_save . . . . .	6
<b>Index</b>	<b>8</b>

gt\_collect

*Collect*

---

**Description**

Collect

**Usage**`gt_collect(gt)`**Arguments**`gt` An object of class `graphTweets` as returned by `gt_edges`.**Value**A named list of `tibble` 1) edges and 2) nodes.**Examples**

```
# simulate dataset
tweets <- data.frame(
  text = c("I tweet @you about @him",
           "I tweet @me about @you"),
  screen_name = c("me", "him"),
  retweet_count = c(19, 5),
  status_id = c(1, 2),
  stringsAsFactors = FALSE
)

tweets %>%
  gt_edges(text, screen_name, status_id) %>%
  gt_nodes() %>%
  gt_collect() -> net
```

---

gt\_dyn*Dynamise*

---

**Description**

Create a dynamic graph to import in Gephi.

**Usage**`gt_dyn(gt, lifetime = Inf)`

**Arguments**

gt                    An object of class graphTweets as returned by [gt\\_edges](#).  
 lifetime            Lifetime of a tweet in milliseconds, defaults to Inf.

**Examples**

```
## Not run:
# simulate dataset
tweets <- data.frame(
  text = c("I tweet @you about @him",
           "I tweet @me about @you"),
  screen_name = c("me", "him"),
  retweet_count = c(19, 5),
  created_at = c(Sys.time(), Sys.time() + 15000),
  status_id = c(1, 2),
  stringsAsFactors = FALSE
)

tweets %>%
  gt_edges(text, screen_name, status_id, "created_at") %>%
  gt_nodes() %>%
  gt_dyn() %>%
  gt_collect() -> net

## End(Not run)
```

---

 gt\_edges

*Edges*

---

**Description**

Get edges from data.frame of tweets.

**Usage**

```
gt_edges(data, tweets, source, id, ...)

gt_edges_(data, tweets = "text", source = "screen_name", id = "status_id",
  ...)

gt_edges_hash(data, hashtags, source, ..., t1 = TRUE)

gt_edges_hash_(data, hashtags = "hashtags", source = "screen_name", ...,
  t1 = TRUE)

gt_edges_hashes(data, hashtags, t1 = TRUE)

gt_edges_hashes_(data, hashtags = "hashtags", t1 = TRUE)
```

**Arguments**

data	Data.frame of tweets, usually returned by the <code>rtweet</code> package.
tweets	Column containing tweets.
source	Author of tweets.
id	tweets unique id.
...	any other column name, see examples.
hashtags	Column containing hashtags.
t1	Set to TRUE to convert hashtags to lower case.

**Details**

The `t1` arguments stands for `tolower` and allows converting the `#hashtags` to lower case as these often duplicated, i.e.: `#python #Python`.

**Value**

An object of class `graphTweets`.

**Functions**

- `gt_edges` - Build networks of users.
- `gt_edges_hash` - Build networks of users to hashtags.
- `gt_edges_hashes` - Build networks of hashtags co-mentions.

**Examples**

```
# simulate dataset
tweets <- data.frame(
  text = c("I tweet @you about @him and @her",
           "I tweet @me about @you"),
  screen_name = c("me", "him"),
  retweet_count = c(19, 5),
  status_id = c(1, 2),
  hashtags = c("rstats", "Python"),
  stringsAsFactors = FALSE
)

tweets %>%
  gt_edges(text, screen_name, status_id)

tweets %>%
  gt_edges_(RT = "retweet_count") %>%
  gt_nodes()

tweets %>%
  gt_edges_hash(hashtags, screen_name) %>%
  gt_nodes()
```

---

gt_graph	<i>Graph</i>
----------	--------------

---

**Description**

Build igraph object.

**Usage**

```
gt_graph(gt)
```

**Arguments**

gt                    An object of class graphTweets as returned by [gt\\_edges](#).

**Value**

An object of class igraph.

**Examples**

```
# simulate dataset
tweets <- data.frame(
  text = c("I tweet @you about @him",
           "I tweet @me about @you"),
  screen_name = c("me", "him"),
  retweet_count = c(19, 5),
  status_id = c(1, 2),
  stringsAsFactors = FALSE
)

tweets %>%
  gt_edges(text, screen_name, status_id) %>%
  gt_nodes() %>%
  gt_graph() -> net
```

---

gt_nodes	<i>Nodes</i>
----------	--------------

---

**Description**

Get nodes from a graphTweets object.

**Usage**

```
gt_nodes(gt, meta = FALSE)
```

**Arguments**

gt                    An object of class graphTweets as returned by [gt\\_edges](#).  
 meta                 Set to TRUE to add meta data to nodes.

**Value**

An object of class graphTweets, adds nodes.

**Examples**

```
# simulate dataset
tweets <- data.frame(
  text = c("I tweet @you about @him",
           "I tweet @me about @you"),
  screen_name = c("me", "him"),
  retweet_count = c(19, 5),
  status_id = c(1, 2),
  stringsAsFactors = FALSE
)

tweets %>%
  gt_edges(text, screen_name, status_id) %>%
  gt_nodes() -> net
```

---

 gt\_save

*Save*

---

**Description**

Save the graph to file.

**Usage**

```
gt_save(gt, file = "graphTweets.graphml", format = "graphml", ...)
```

**Arguments**

gt                    An object of class graphTweets as returned by [gt\\_edges](#).  
 file                 File name including extension (format).  
 format              Format file format, see [write\\_graph](#).  
 ...                 Any other argument to pass to [write\\_graph](#).

**Examples**

```
## Not run:
# simulate dataset
tweets <- data.frame(
  text = c("I tweet @you about @him",
           "I tweet @me about @you"),
  screen_name = c("me", "him"),
  retweet_count = c(19, 5),
  created_at = c(Sys.time(), Sys.time() + 15000),
  status_id = c(1, 2),
  stringsAsFactors = FALSE
)

tweets %>%
  gt_edges(text, screen_name, "created_at") %>%
  gt_nodes(TRUE) %>%
  gt_dyn() %>%
  gt_save()

## End(Not run)
```
