Package ‘lingtypology’

March 13, 2024

Type Package
Title Linguistic Typology and Mapping
Version 1.1.17
Depends R (>= 3.5.0)
Imports leaflet, leaflet.minicharts, stats, utils, stringdist, grDevices, jsonlite
Description Provides R with the Glottolog database <https://glottolog.org/> and some more abilities for purposes of linguistic mapping. The Glottolog database contains the catalogue of languages of the world. This package helps researchers to make a linguistic maps, using philosophy of the Cross-Linguistic Linked Data project <https://clld.org/>, which allows for while at the same time facilitating uniform access to the data across publications. A tutorial for this package is available on GitHub pages <https://docs.ropensci.org/lingtypology/> and package vignette. Maps created by this package can be used both for the investigation and linguistic teaching. In addition, package provides an ability to download data from typological databases such as WALS, AUTOTYP and some others and to create your own database website.
License GPL (>= 2)

ABVD’s Language identifiers

Description

Language identifiers from ABVD (https://abvd.eva.mpg.de/austronesian/). This dataset is created for abvd.feature function.

Usage

abvd

Format

A data frame with 1468 rows and 2 variables:

id  language identifier

glottocode  Glottocode
Description

This function downloads data from ABVD (https://abvd.eva.mpg.de/austronesian/) and changes language names to the names from lingtypology database. You need the internet connection.

Usage

abvd.feature(feature)

Arguments

feature A character vector that define a language id from ABVD (e.g. "1", "292").

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

Examples

# abvd.feature(c(292, 7))

Description

This function downloads data from AfBo (https://afbo.info/) and changes language names to the names from lingtypology database. You need the internet connection.

Usage

afbo.feature(features = "all", na.rm = TRUE)
Arguments

features A character vector that define with an affix functions from AfBo (e.g. "all", "adjectivizer", "focus").
na.rm Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

See Also

Examples

# afbo.feature()
# afbo.feature(c("adjectivizer", "adverbializer"))

aff.lang

Get affiliation by language

Description

Takes any vector of languages and returns affiliation.

Usage

aff.lang(x)

Arguments

x A character vector of the languages (can be written in lower case)

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

area.lang, country.lang, gltc.lang, iso.lang, lat.lang, long.lang, subc.lang, url.lang

Examples

aff.lang('Korean')
aff.lang(c('Korean', 'Polish'))
area.lang

Get macro area by language

Description
Takes any vector of languages and returns macro area.

Usage
area.lang(x)

Arguments
x character vector of the languages (can be written in lower case)

Author(s)
George Moroz <agricolamz@gmail.com>

See Also
aff.lang, country.lang, gltc.lang, iso.lang, lat.lang, long.lang, subc.lang, url.lang

Examples
area.lang('Kabardian')
area.lang(c('Kabardian', 'Aduge'))

atlas.database

Create an atlas

Description
This function creates an rmarkdown based atlas from data provided by users. This function creates
the template, after it should be rendered by rmarkdown package. The DT package is required during
the rendering.

Usage
atlas.database(
    languages,
    latitude,
    longitude,
    features,
    atlas.name = "",
    author = ""
)
**Arguments**

- **languages**: character vector of languages (can be written in lower case)
- **latitude**: numeric vector of latitudes (optional)
- **longitude**: numeric vector of longitudes (optional)
- **features**: dataframe where each column is a feature set
- **atlas.name**: string with an atlas name
- **author**: string with the authors list

---

**autotyp**  
**AUTOTYP’s Language identifiers**

---

**Description**

Language identifiers from AUTOTYP v. 1.1.1 ([https://github.com/autotyp/autotyp-data/](https://github.com/autotyp/autotyp-data/)). This dataset is created for `autotyp.feature` function.

**Usage**

`autotyp`  

**Format**

An object of class `data.frame` with 1342 rows and 3 columns.

**Details**

#` @format A data frame with 1342 rows and 3 variables:

- **path**  path to the dataset in autotyp repo
- **variable**  variable name
- **file**  topic name
autotyp.feature  Download AUTOTYP data

Description
This function downloads data from AUTOTYP (https://github.com/autotyp/autotyp-data#the-autotyp-database) and changes language names to the names from lingtypology database. You need the internet connection.

Usage
autotyp.feature(features, na.rm = TRUE)

Arguments

features  A character vector that define with a feature names from AUTOTYP.
na.rm  Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

See Also

Examples

# autotyp.feature(c('Has Gender', 'Has Numeral Classifiers'))

bantu  BANTU’s Language identifiers

Description
Language identifiers from BANTU (https://abvd.eva.mpg.de/bantu/index.php). This dataset is created for bantu.feature function.

Usage
bantu
Format

A data frame with 430 rows and 2 variables:

- **id**: BANTU word id
- **word**: word

---

**bantu.feature** | Download BANTU data

---

Description

This function downloads data from Bantu Basic Vocabulary Database ([https://abvd.eva.mpg.de/bantu/index.php](https://abvd.eva.mpg.de/bantu/index.php)) and changes language names to the names from lingtypology database. You need the internet connection.

Usage

```r
bantu.feature(features)
```

Arguments

- **features**: A character vector that define with a feature ids from BANTU ('house', 'cat').

Author(s)

Anna Smirnova <annedadaa@gmail.com>

See Also

```r
abvd.feature, afbo.feature, autotyp.feature, oto_mangueanIC.feature, phoible.feature, sails.feature, uralex.feature, valpal.feature
```

Examples

```r
# bantu.feature(c('house', 'cat'))
```
bivaltyp.feature  Download BivalTyp data

Description

This function downloads data from BivalTyp (https://www.bivaltyp.info/) and changes language names to the names from lingtypology database. You need the internet connection.

Usage

bivaltyp.feature()

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

abvd.feature, afbo.feature, autotyp.feature, oto_mangueanIC.feature, phoible.feature, sails.feature, valpal.feature, wals.feature

# bivaltyp.feature()

circassian  Circassian villages in Russia

Description

A dataset contains the list of the Circassian villages in Russia with genealogical affiliation, coordinates and district names. Most data collected during the fieldworks (2011–2018).

Usage

circassian

Format

A data frame with 158 rows and 6 variables:

longitude longitude
latitude latitude
village name of the village
countries

**dialect** names of the Circassian dialects

**language** according standard Circassian division there are West Circassian and Kabardian languages

---

**Catalogue of countries**

**Description**

Catalogue of countries, ISO-codes and official languages

**Usage**

countries

**Format**

A data frame with 189 rows and 5 variables:

- **alpha3** ISO 3166-3 code of the country
- **alpha2** ISO 3166-2 code of the country
- **country_name** Country name
- **additional_names** Additional names of the country
- **official_languages** Official languages

---

**Get country by language**

**Description**

Takes any vector of languages and returns countries where those languages are used as ISO 3166-1 alpha-2 codes.

**Usage**

country.lang(x, full_name = TRUE)

**Arguments**

- **x** A character vector of the languages (can be written in lower case)
- **full_name** A logical value, whether return ISO 3166-2 codes or full names.
Author(s)
George Moroz <agricolamz@gmail.com>

See Also
aff.lang, area.lang, gltc.lang, iso.lang, lat.lang, long.lang, subc.lang, url.lang

Examples

country.lang('Korean')
country.lang(c('Korean', 'Polish'))

dataset

eurasianphonology  Eurasianphonology data

Description
Data from The database of Eurasian phonological inventories (https://eurphon.info). This dataset is created for eurasianphonology.feature function.

Usage
eurasianphonology

Format
A data frame with 19825 rows and 19 variables:

id  Language id
iso  ISO code
name  Another language name
type  Language or dialect
language  Language name
latitude  latitude
longitude  longitude
gen1  Language Family
gen2  Language Family
tones  Inventory of tones
syllab  Syllab structure
cluster  Cluster
finals  Finals
source  Source
comment  Comment
**eurasianphonology.feature**

**contr** Contributor

**segment_type** Vowels or consonants

**segments** Segments

**glottocode** Glottocode

---

**eurasianphonology.feature**

*Opens data from the database of Eurasian phonological inventories*

---

**Description**

This function opens downloaded data from the database of Eurasian phonological inventories ([https://eurphon.info](https://eurphon.info)).

**Usage**

```r
eurasianphonology.feature()
```

**Author(s)**

Kirill Koncha <majortomblog@gmail.com>

**See Also**

**Examples**

```r
eurasianphonology.feature()
```

---

**frequency_list.feature**

*Download frequency list*

---

**Description**

This function downloads frequency list from OpenSubtitles2018 ([https://opus.nlpl.eu/](https://opus.nlpl.eu/)). You need the internet connection.

**Usage**

```r
frequency_list.feature(languages, list_type = "full")
```
Arguments

list_type  Type of frequency list. Possible values: ‘full’, ‘50k’, ‘ignored’. By default is full.

Author(s)

Ekaterina Zalivina <zalivina01@mail.ru>

See Also

abvd.feature, afbo.feature, oto_mangueanIC.feature, phoible.feature, sails.feature, uralex.feature, valpal.feature, wals.feature

Examples

# frequency_list.feature('ro')
# frequency_list.feature('en', '50k')
# frequency_list.feature(c('en', 'ru'), '50k')

---

glottolog  Catalogue of languages of the world

Description

A dataset contains the original catalogue of languages of the world involving genealogical affiliation, macro-area, country, iso code, and coordinates.

Usage

`glottolog`

Format

A data frame with 26879 rows and 10 variables:

- `glottocode`  languoid code from Glottolog 5.0
- `language`  name of the language
level  languoid type: dialect or language (possible values are dialect, language, family, bookkeeping, pseudo family, sign language, unclassifiable, pidgin, unattested, artificial language, speech register, mixed language)
area  have six values Africa, Australia, Eurasia, North America, Papunesia, South America
latitude  latitude
longitude  longitude
countries  list of countries, where the language is spoken
affiliation  genealogical affiliation
subclassication  subclassication in a Newick format

Details

gltc.iso  Get Glottocode by ISO 639–3 code

Description

Usage
gltc.iso(x)

Arguments
x  A character vector of the Glottocodes.

Author(s)
George Moroz <agricolamz@gmail.com>

See Also
aff.lang, area.lang, lat.lang, long.lang

Examples
gltc.iso('ady')
gltc.iso(c('ady', 'rus')))
**gltc.lang**  
Get Glottocode by language

**Description**
Takes any vector of languages and returns Glottocode.

**Usage**
gltc.lang(x)

**Arguments**
x  A character vector of the languages (can be written in lower case)

**Author(s)**
George Moroz <agricolamz@gmail.com>

**See Also**
  aff.lang, area.lang, country.lang, iso.lang, lat.lang, long.lang, subc.lang, url.lang

**Examples**
gltc.lang('Kabardian')  
gltc.lang(c('Kabardian', 'Udi'))

---

**grambank.feature**  
Download Grambank data

**Description**
This function downloads data from Grambank ([https://grambank.clld.org/](https://grambank.clld.org/)) and changes language names to the names from lingtypology database. You need the internet connection.

**Usage**
grambank.feature(features, na.rm = TRUE)

**Arguments**
features  A character vector that define with a feature ids from Grambank (e. g. "gb026", "gb042").
na.rm  Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.
Author(s)

George Moroz <agricolamz@gmail.com>

See Also

Examples

# grambank.feature(c("gb026", "gb042"))

---

## Imports

Objects imported from other packages

---

### Description

These objects are imported from other packages. Follow the links to their documentation.

#### magrittr %>%

---

### is.glottolog

Are these languages in glottolog?

---

### Description

Takes any vector of languages or ISO codes and returns a logical vector.

#### Usage

is.glottolog(x, response = FALSE)

#### Arguments

- **x**: A character vector of languages (can be written in lower case) or ISO codes
- **response**: logical. If TRUE, when language is absent, return warnings with a possible candidates.

### Author(s)

George Moroz <agricolamz@gmail.com>
**Examples**

```r
is.glottolog(c('Kabardian', 'Russian'))
is.glottolog('Buyaka')
```

```r
## Not run:
# Add warning message with suggestions
is.glottolog(c('Adyge', 'Russian'), response = TRUE)
# > FALSE TRUE
# Warning message:
# In is.glottolog(c('Kabardia', 'Russian'), response = TRUE) :
# Language Kabardia is absent in our version of the Glottolog database.
# Did you mean Kabardian, Greater Kabardian?

## End(Not run)
```

---

**iso.gltc**

*Get ISO 639–3 code by Glottocode*

**Description**

Takes any vector of Glotocodes and returns ISO code.

**Usage**

```r
iso.gltc(x)
```

**Arguments**

- `x` A character vector of Glotocodes.

**Author(s)**

George Moroz <agricolamz@gmail.com>

**See Also**

`aff.lang`, `area.lang`, `lat.lang`, `long.lang`

**Examples**

```r
iso.gltc('adyg1241')
iso.gltc(c('adyg1241', 'udii1243'))
```
iso.lang

Get ISO 639–3 code by language

Description
Takes any vector of languages and returns ISO code.

Usage
iso.lang(x)

Arguments
x A character vector of the languages (can be written in lower case)

Author(s)
George Moroz <agricolamz@gmail.com>

See Also
aff.lang, area.lang, country.lang, gltc.lang, lat.lang, long.lang, subc.lang, url.lang

Examples
iso.lang('Kabardian')
iso.lang(c('Kabardian', 'Udi'))

iso3.iso1
Get ISO 639-3 code from ISO 639-1

Description

Usage
iso3.iso1(x)

Arguments
x A character vector of ISO 639-3 codes.

Author(s)
Ekaterina Zalivina <zalivina01@mail.ru>
See Also

aff.lang, area.lang, lat.lang, long.lang

Examples

iso3.iso1('bs')
iso3.iso1(c('co', 'it', 'ar'))

iso_639

ISO 639-3 is a set of codes that defines three-letter identifiers for all known human languages.

Description

ISO 639 provides three language code sets: one is a two-letter code (ISO 639-1) and two others are three-letter codes (ISO 639-2 and ISO 639-3) for the representation of names of languages. ISO 639-1 was devised primarily for use in terminology, lexicography and linguistics. ISO 639-2 was devised primarily for use in terminology and bibliography. ISO 639-3 was devised to provide a comprehensive set of identifiers for all languages for use in a wide range of applications, including linguistics, lexicography and internationalization of information systems. It attempts to represent all known full languages.

Usage

iso_639

Format

A data frame with 188 rows and 5 variables:

ISO_639_3 The three-letter 639-3 identifier
ISO_639_2_B Equivalent 639-2 identifier of the bibliographic applications code set
ISO_639_2_T Equivalent 639-2 identifier of the terminology applications code set
ISO_639_1 Equivalent 639-1 identifier
Ref_Name Reference language name

Details

Source

https://iso639-3.sil.org/
lang.aff

Get languages by affiliation

Description
Takes any vector of affiliations and returns languages.

Usage
lang.aff(x, include.dialects = FALSE, list = FALSE)

Arguments
x          A character vector of the affiliations (can be written in lower case)
include.dialects    logical. If TRUE, it returns all languages and dialects, if FALSE it returns only languages.
list        logical. If TRUE, it returns a list of languages, if FALSE it returns a named vector.

Author(s)
George Moroz <agricolamz@gmail.com>

See Also
lang.iso

Examples
lang.aff('Slavic')
lang.aff(c('Slavic', 'Celtic'))
lang.aff(c('Slavic', 'Celtic'), list = TRUE)

lang.country

Get language by country

Description
Takes any vector of countries and returns languages.

Usage
lang.country(x, list = TRUE)
Arguments

x  character vector of the countries (in alpha-2 ISO codes)
list logical. If TRUE, it returns a list of languages, if FALSE it returns a named vector.

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

aff.lang, country.lang, gltc.lang, iso.lang, lat.lang, long.lang, subc.lang, url.lang

Examples

lang.country("AD")
lang.country(c("AD", "AE"))

lang.gltc  Get language by Glottocode

Description

Takes any vector of Glottocodes and returns languages.

Usage

lang.gltc(x)

Arguments

x  A character vector of the Glottocodes.

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

lang.aff

Examples

lang.gltc("adyg1241")
lang.gltc(c("adyg1241", "udii1243"))
**lang.iso**  
*Get language by ISO 639–3 code*

**Description**

Takes any vector of ISO codes and returns languages.

**Usage**

lang.iso(x)

**Arguments**

x A character vector of the ISO codes.

**Author(s)**

George Moroz <agricolamz@gmail.com>

**See Also**

lang.aff

**Examples**

lang.iso('ady')
lang.iso(c('ady', 'rus'))

---

**lat.lang**  
*Get latitude by language*

**Description**

Takes any vector of languages and returns latitude.

**Usage**

lat.lang(x)

**Arguments**

x A character vector of the languages (can be written in lower case)

**Author(s)**

George Moroz <agricolamz@gmail.com>
level.lang

See Also

aff.lang, area.lang, country.lang, gltc.lang, iso.lang, long.lang, subc.lang, url.lang

Examples

```r
lat.lang('Kabardian')
long.lang('Kabardian')
lat.lang(c('Kabardian', 'Russian'))
long.lang(c('Kabardian', 'Russian'))
```

---

level.lang

*Get a level of language by language*

Description

Takes any vector of languages and returns a level of language.

Usage

```r
level.lang(x)
```

Arguments

- `x` character vector of the languages (can be written in lower case)

Author(s)

Sasha Shakhnova

See Also

aff.lang, country.lang, gltc.lang, iso.lang, lat.lang, long.lang, subc.lang, url.lang

Examples

```r
level.lang('Russian Sign Language')
level.lang(c('Archi', 'Chechen'))
```
long.lang  

Get longitude by language

Description

Takes any vector of languages and returns longitude.

Usage

long.lang(x, map.orientation = "Pacific")

Arguments

x  
A character vector of the languages (can be written in lower case)

map.orientation  
A character vector with values "Pacific" and "Atlantic". It distinguishes Pacific-centered and Atlantic-centered maps. By default is "Pacific".

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

aff.lang, area.lang, country.lang, gltc.lang, iso.lang, lat.lang, subc.lang, url.lang

Examples

lat.lang("Kabardian")
long.lang("Kabardian")
lat.lang(c("Kabardian", "Russian"))
long.lang(c("Kabardian", "Russian"))
long.lang(c("Kabardian", "Aleut"), map.orientation = "Pacific")

map.feature  
Create a map

Description

Map a set of languages and color them by feature or two sets of features.
Usage

map.feature(
  languages,
  features = "",
  label = "",
  popup = "",
  latitude = NA,
  longitude = NA,
  label.hide = TRUE,
  label.fsize = 15,
  label.font = "sans-serif",
  label.position = "right",
  label.emphasize = list(NULL, "black"),
  shape = NULL,
  shape.size = 20,
  pipe.data = NULL,
  shape.color = "black",
  stroke.features = NULL,
  point.cluster = FALSE,
  density.estimation = NULL,
  density.method = "fixed distance",
  density.estimation.color = NULL,
  density.estimation.opacity = 0.6,
  density.points = TRUE,
  density.width = NULL,
  density.legend = TRUE,
  density.legend.opacity = 1,
  density.legend.position = "bottomleft",
  density.title = "",
  density.control = FALSE,
  isogloss = NULL,
  isogloss.color = "black",
  isogloss.opacity = 0.2,
  isogloss.line.width = 3,
  isogloss.width = NULL,
  color = NULL,
  stroke.color = NULL,
  image.url = NULL,
  image.width = 100,
  image.height = 100,
  image.X.shift = 0,
  image.Y.shift = 0,
  title = NULL,
  stroke.title = NULL,
  control = "",
  legend = TRUE,
  legend.opacity = 1,
  legend.position = "topright",}
stroke.legend = TRUE,
stroke.legend.opacity = 1,
stroke.legend.position = "bottomleft",
width = 5,
stroke.radius = 9.5,
opacity = 1,
stroke.opacity = 1,
scale.bar = TRUE,
scale.bar.position = "bottomleft",
minimap = FALSE,
minimap.position = "bottomright",
minimap.width = 150,
minimap.height = 150,
facet = NULL,
tile = "OpenStreetMap.Mapnik",
tile.name = NULL,
tile.opacity = 1,
zoom.control = FALSE,
zoom.level = NULL,
rectangle.lng = NULL,
rectangle.lat = NULL,
rectangle.color = "black",
line.lng = NULL,
line.lat = NULL,
line.type = "standard",
line.color = "black",
line.opacity = 0.8,
line.label = NULL,
line.width = 3,
graticule = NULL,
minichart = "bar",
minichart.data = NULL,
minichart.time = NULL,
minichart.labels = FALSE,
map.orientation = "Pacific",
radius = NULL
)

**Arguments**

- **languages**: character vector of languages (can be written in lower case)
- **features**: character vector of features
- **label**: character vector of strings that will appear near points
- **popup**: character vector of strings that will appear in pop-up window
- **latitude**: numeric vector of latitudes
- **longitude**: numeric vector of longitudes
- **label.hide**: logical. If FALSE, labels are displayed allways. If TRUE, labels are displayed on mouse over. By default is TRUE.
label.fsize numeric value of the label font size. By default is 14.

label.font string with values of generic family: "serif", "sans-serif", "monospace", or font name e. g. "Times New Roman"

label.position the position of labels: "left", "right", "top", "bottom"

label.emphasize is the list. First argument is a vector of points in dataframe that should be emphasized. Second argument is a string with a color for emphasis.

shape 1. if TRUE, creates icons (up to five categories) for values in the features variable;
2. it also could be a vector of any strings that represents the levels of the features variable;
3. it also could be a string vector that represents the number of observations in dataset.

shape.size size of the shape icons

pipe.data this variable is important, when you use map.feature with dplyr pipes. Expected usage: pipe.data = .

shape.color color of the shape icons

stroke.features additional independent stroke features

point.cluster logical. If TRUE, points will be united into clusters.

density.estimation additional independent features, used for density estimation

density.method string with one of the two methods: "kernal density estimation" or "fixed distance" (default)

density.estimation.color vector of density polygons' colors

density.estimation.opacity a numeric vector of density polygons opacity.

density.points logical. If FALSE, it doesn’t show points in polygonees.

density.width for density.method = "fixed distance" it is a numeric measure (1 is 1km). For density.method = "kernal density estimation" it is a vector with two measures (first is latitude, second is longitude). Defaults are normal reference bandwidth (see bandwidth.nrd).

density.legend logical. If TRUE, function show legend for density features. By default is FALSE.

density.legend.opacity a numeric vector of density-legend opacity.

density.legend.position the position of the legend: "topright", "bottomright", "bottomleft", "topleft"

density.title title of a density-feature legend

density.control logical. If TRUE, function show layer control buttons for density plot. By default is FALSE
isogloss dataframe with corresponding features
isogloss.color vector of isoglosses' colors
isogloss.opacity
  a numeric vector of density polygons opacity.
isogloss.line.width
  a numeric value for line width
isogloss.width for density.method = "fixed distance" it is a numeric measure (1 is 1km). For density.method = "kernal density estimation" it is a vector with two measures (first is latitude, secong is longitude). Defaults are normal reference bandwidth (see bandwidth.nrd).
color vector of colors or palette. The color argument can be (1) a character vector of RGM or named colors; (2) the name of an RColorBrewer palette; (3) the full name of a viridis palette; (4) a function that receives a single value between 0 and 1 and returns a color. For more examples see colorNumeric
stroke.color vector of stroke colors
image.url character vector of URLs with an images
image.width numeric vector of image widths
image.height numeric vector of image heights
image.X.shift numeric vector of image's X axis shift relative to the latitude-longitude point
image.Y.shift numeric vector of image's Y axis shift relative to the latitude-longitude point
title title of a legend.
stroke.title title of a stroke-feature legend.
control vector of grouping values that make it possible to create control panel that can turn off/on some points on the map.
legend logical. If TRUE, function show legend. By default is TRUE.
legend.opacity a numeric vector of legend opacity.
legend.position the position of the legend: "topright", "bottomright", "bottomleft","topleft"
stroke.legend logical. If TRUE, function show stroke.legend. By default is FALSE.
stroke.legend.opacity a numeric vector of stroke.legend opacity.
stroke.legend.position the position of the stroke.legend: "topright", "bottomright", "bottomleft","topleft"
width a numeric vector of radius for circles or width for barcharts in minicharts.
stroke.radius a numeric vector of stroke radii for the circles.
opacity a numeric vector of marker opacity.
stroke.opacity a numeric vector of stroke opacity.
scale.bar logical. If TRUE, function shows scale-bar. By default is TRUE.
scale.bar.position the position of the scale-bar: "topright", "bottomright", "bottomleft","topleft"
minimap logical. If TRUE, function shows mini map. By default is FALSE.
minimap.position  
the position of the minimap: "topright", "bottomright", "bottomleft", "topleft"

minimap.width  
The width of the minimap in pixels.

minimap.height  
The height of the minimap in pixels.

facet  
character vector that provide a grouping variable. If it is no NULL, then as a result a list of leaflets for sync or latticeView functions from mapview package is returned.

tile  
a character vector with a map tiles, popularized by Google Maps. See here for the complete set.

tile.name  
a character vector with a user’s map tiles’ names.

tile.opacity  
numeric value from 0 to 1 denoting opacity of the tile.

zoom.control  
logical. If TRUE, function shows zoom controls. By default is FALSE.

zoom.level  
a numeric value of the zoom level.

rectangle.lng  
vector of two longitude values for rectangle.

rectangle.lat  
vector of two latitude values for rectangle.

rectangle.color  
vector of rectangle border color.

line.lng  
vector of two (or more) longitude values for line.

line.lat  
vector of two (or more) latitude values for line.

line.type  
a character string indicating which type of line is to be computed. One of "standard" (default), or "logit". The first one should be combined with the arguments line.lat and line.lng and provide simple lines. Other variant "logit" is the decision boundary of the logistic regression made using longitude and latitude coordinates (works only if feature argument have two levels).

line.color  
vector of line color.

line.opacity  
a numeric vector of line opacity.

line.label  
character vector that will appear near the line.

line.width  
a numeric vector of line width.

graticule  
a numeric vector for graticule spacing in map units between horizontal and vertical lines.

minichart  
citation from leaflet.minicharts package: "Possible values are "bar" for bar charts, "pie" for pie charts, "polar-area" and "polar-radius"."

minichart.data  
citation from leaflet.minicharts package: "A numeric matrix with number of rows equal to the number of elements in lng or lat and number of column equal to the number of variables to represent. If parameter time is set, the number of rows must be equal to the length of lng times the number of unique time steps in the data."

minichart.time  
citation from leaflet.minicharts package: "A vector with length equal to the number of rows in chartdata and containing either numbers representing time indices or dates or datetimes. Each unique value must appear as many times as the others. This parameter can be used when one wants to represent the evolution of some variables on a map."
minichart.labels
citation from leaflet.minicharts package: "Should values be displayed above chart elements."

map.orientation
a character vector with values "Pacific" and "Atlantic". It distinguishes Pacific-centered and Atlantic-centered maps. By default is "Pacific".

radius
deprecated argument

<table>
<thead>
<tr>
<th>oto_mangueanIC</th>
<th>Oto-Manguean Inflectional Class Database Language identifiers</th>
</tr>
</thead>
</table>

Description
Language identifiers from Oto-Manguean Inflectional Class Database (https://oto-manguean.surrey.ac.uk/). This dataset is created for oto_mangueanIC.feature function.

Usage
oto_mangueanIC

Format
An object of class tbl_df (inherits from tbl, data.frame) with 20 rows and 2 columns.

Details
' @format A data frame with 20 rows and 2 variables:

Language.name Language names from Oto-Manguean Inflectional Class Database
language Language names from Glottolog database
oto_mangueanIC.feature

Download Oto-Manguean Inflectional Class Database data

Description
This function downloads data from Oto-Manguean Inflectional Class Database (https://oto-manguean.surrey.ac.uk/) and creates a language column with the names from lingtypology database. You need the internet connection.

Usage
oto_mangueanIC.feature()

Author(s)
George Moroz <agricolamz@gmail.com>

See Also
abvd.feature, afbo.feature, autotyp.feature, phoible.feature, sails.feature, uralex.feature, valpal.feature, wals.feature

phoible

Phoible glottolog - language correspondencies

Description
Language correspondencies for Phoible (https://phoible.org/). This dataset is created for phoible.feature function.

Usage
phoible

Format
A data frame with 2185 rows and 2 variables:
language language
Glottocode Glottocode
### phoible.feature

**Download PHOIBLE data**

**Description**

This function downloads data from PHOIBLE ([https://phoible.org/](https://phoible.org/)) and changes language names to the names from lingtypology database. You need the internet connection.

**Usage**

```r
phoible.feature(source = "all", na.rm = TRUE)
```

**Arguments**

- `source`: A character vector that define with a source names from PHOIBLE (possible values: "all", "aa", "gm", "ph", "ra", "saphon", "spa", "upsid").
- `na.rm`: Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

**See Also**

**Examples**

```r
# phoible.feature()
# phoible.feature(c('consonants', 'vowels'), source = "UPSID")
```

### phonological_profiles  

**Number of consonants and presence of ejectives**

**Description**

Number of consonants and presence of ejectives

**Usage**

```
phonological_profiles
```
Format

A data frame with 19 rows and 4 variables:

- **language**: language name
- **consonants**: number of consonants. Based on UPSID database.
- **vowels**: number of vowels. Based on UPSID database.
- **ejectives**: presence of ejective sounds.
- **tone**: presence of tone.
- **stress**: presence of stress.
- **long_vowels**: presence of long vowels.

polygon.points_fd

*Get polygons from fixed distance circles around coordinates*

**Description**

This function is based on this answer: https://www.r-bloggers.com/merging-spatial-buffers-in-r/

**Usage**

```r
polygon.points_fd(latitude, longitude, width)
```

**Arguments**

- **latitude**: numeric vector of latitudes
- **longitude**: numeric vector of longitudes
- **width**: radius for creating polygons around points

polygon.points_kde

*Get kernel density estimation polygon from coordinates*

**Description**

This function is based on this answer: https://gis.stackexchange.com/a/203623/

**Usage**

```r
polygon.points_kde(latitude, longitude, latitude.width, longitude.width)
```
**providers**

**Arguments**

- **latitude**: numeric vector of latitudes
- **longitude**: numeric vector of longitudes
- **latitude.width**: bandwidths for latitude values. Defaults to normal reference bandwidth (see `bandwidth.nrd`).
- **longitude.width**: bandwidths for longitude values. Defaults to normal reference bandwidth (see `bandwidth.nrd`).

**Description**

List of all providers with their variations taken from leaflet package

**Usage**

```r
providers
```

**Format**

A list of characters

**Source**

---

**sails.feature**

**Download SAILS data**

**Description**

This function downloads data from SAILS ([https://sails.cld.org/](https://sails.cld.org/)) and changes language names to the names from lingtypology database. You need the internet connection.

**Usage**

```r
sails.feature(features, na.rm = TRUE)
```
Arguments

features  A character vector that define with a feature ids from SAILS (e.g. "and1", "argex4-1-3").

na.rm  Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

oto_mangueanIC.feature, phoible.feature, soundcomparisons.feature, uralex.feature,
valpal.feature, vanuatu.feature, wals.feature

Examples

# sails.feature(c("and1", "and11"))

Description

Language identifiers from SOUNDCOMPARISONS. This dataset is created for soundcomparisons.feature function.

Usage

soundcomparisons

Format

An object of class data.frame with 556 rows and 3 columns.

Details

# @format A data frame with 556 rows and 2 variables:

LanguageName  SOUNDCOMPARISONS language identifier
LanguageId  Language Id
**soundcomparisons.feature**

*Download SOUNDCOMPARISONS data*

**Description**

This function downloads data from SOUNDCOMPARISONS and changes language names to the names from lingtypology database. You need the internet connection.

**Usage**

```r
soundcomparisons.feature(word)
```

**Arguments**

- **word** A character vector that define with a feature ids from SOUNDCOMPARISONS (e.g. "one", "sharp_fem", "near_neut", "on_the_left", "I_will_give", "write_ipv_sg", "your_pl_pl").

**Examples**

```r
# soundcomparisons.feature(c("sun", "house"))
```

---

**subc.lang**

*Get subclassification by language*

**Description**

Takes any vector of languoids and returns subclassification in the Newick tree format.

**Usage**

```r
subc.lang(x)
```
Arguments

- A character vector of the languoids (can be written in lower case)

Author(s)

George Moroz <agricolamz@gmail.com>

aff.lang, area.lang, country.lang, gltc.lang, iso.lang, lat.lang, long.lang

Examples

```r
subc.lang('Korean')
subc.lang(c('Korean', 'Lechitic'))
```

---

**uralex**

*UraLex's Language identifiers*

Description

Language identifiers from UraLex ([https://github.com/lexibank/uralex/](https://github.com/lexibank/uralex/)). This dataset is created for *uralex.feature* function.

Usage

- uralex

Format

A data frame with 27 rows and 3 variables:

- **uralex.name** language name from database
- **glottocode** Glottocodes
- **language** language from lingtypology
uralex.feature  Download UraLex data

Description
This function downloads data from UraLex (https://github.com/lexibank/uralex/) and changes language names to the names from lingtypology database. You need the internet connection.

Usage
uralex.feature(na.rm = TRUE)

Arguments
na.rm Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

Author(s)
George Moroz <agricolamz@gmail.com>

See Also

Examples
# uralex.feature()

url.lang  Make a url-link to glottolog page for a language

Description
Takes any vector of languages and returns links to glottolog pages.

Usage
url.lang(x, popup = "")

Arguments
x A character vector of languages (can be written in lower case)
popup character vector of strings that will appear in pop-up window of the function
Author(s)

George Moroz <agricolamz@gmail.com>

See Also

aff.lang, area.lang, country.lang, gltc.lang, iso.lang, lat.lang, long.lang, subc.lang

Examples

url.lang("Korean")
url.lang(c("Gangou", "Hachijo", "West Circassian", "Ganai"))

valpal.feature  Download ValPaL data

Description

This function downloads data from ValPal (https://valpal.info) and changes language names to the names from lingtypology database. You need the internet connection.

Usage

valpal.feature(na.rm = FALSE)

Arguments

na.rm  Logical. If TRUE function removes all languages not available in lingtypology database. By default is FALSE.

Author(s)

George Moroz <agricolamz@gmail.com>

See Also

Examples

# valpal.feature()
vanuatu.feature  Download Vanuatu Voices data

Description
This function downloads data from Vanuatu Voices (https://vanuatuvoices.clld.org/). You need the internet connection.

Usage
vanuatu.feature(features, na.rm = TRUE)

Arguments
- features: A vector with parameters from Concepts (https://vanuatuvoices.clld.org/parameters)
- na.rm: Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

Author(s)
Mikhail Leonov

See Also

wals  WALS’s Language identifiers

Description
Language identifiers from WALS (https://wals.info/). This dataset is created for wals.feature function.

Usage
wals

Format
A data frame with 2950 rows and 2 variables:
- wals.code: WALS language identifier
- glottocode: Glottocode
wals.feature Download WALS data

Description
This function downloads data from WALS (https://wals.info/) and changes language names to the names from lingtypology database. You need the internet connection.

Usage
wals.feature(features, na.rm = TRUE)

Arguments
- features: A character vector that define with a feature ids from WALS (e.g. "1a", "21b").
- na.rm: Logical. If TRUE function removes all languages not available in lingtypology database. By default is TRUE.

Author(s)
George Moroz <agricolamz@gmail.com>
