Package ‘poissonreg’

August 6, 2021

**Title**  Model Wrappers for Poisson Regression

**Version**  0.1.1

**License**  MIT + file LICENSE

**BugReports**  https://github.com/tidymodels/poissonreg/issues

**Depends**  parsnip (≥ 0.1.3.9000), R (≥ 2.10)

**Imports**  dplyr, generics, glue, purrr, rlang, stats, tibble, tidyr

**Suggests**  covr, pscl, spelling, testthat

**Encoding**  UTF-8

**Language**  en-US

**LazyData**  true

**Roxygen** list(markdown = TRUE)

**RoxygenNote**  7.1.1.9000

**R topics documented:**

- poisson_reg .................................................. 2
- seniors ....................................................... 4
- tidy_zip ...................................................... 4
Description

`poisson_reg()` defines a generalized linear model for count data that follow a Poisson distribution. There are different ways to fit this model. See the engine-specific pages for more details:

- `glm` (default)
- `hurdle`
- `zeroinfl`
- `glmnet`
- `stan`

More information on how `parsnip` is used for modeling is at https://www.tidymodels.org/.

Usage

```r
poisson_reg(
  mode = "regression",
  penalty = NULL,
  mixture = NULL,
  engine = "glm"
)
```

```r
## S3 method for class 'poisson_reg'
update(
  object,
  parameters = NULL,
  penalty = NULL,
  mixture = NULL,
  fresh = FALSE,
  ...
)
```

Arguments

- **mode** A single character string for the type of model. The only possible value for this model is "regression".
- **penalty** A non-negative number representing the total amount of regularization (`glmnet` only).
- **mixture** A number between zero and one (inclusive) that is the proportion of L1 regularization (i.e. lasso) in the model. When `mixture = 1`, it is a pure lasso model while `mixture = 0` indicates that ridge regression is being used. (`glmnet` and `spark` only).
- **engine** A single character string specifying what computational engine to use for fitting.
poisson_reg

object  A boosted tree model specification.

parameters  A 1-row tibble or named list with main parameters to update. If the individual arguments are used, these will supersede the values in parameters. Also, using engine arguments in this object will result in an error.

type  A logical for whether the arguments should be modified in-place of or replaced wholesale.

...  Not used for update().

Details

This function only defines what type of model is being fit. Once an engine is specified, the method to fit the model is also defined.

The model is not trained or fit until the fit.model_spec() function is used with the data.

Value

An updated model specification.

Examples

poisson_reg()

# Model from Agresti (2007) Table 7.6
log_lin_mod <-
  poisson_reg() %>%
  set_engine("glm") %>%
  fit(count ~ (.)^2, data = seniors)

summary(log_lin_mod$fit)

# library(pscl)

data("bioChemists", package = "pscl")

poisson_reg() %>%
  set_engine("hurdle") %>%
# Extended formula:
  fit(art ~ . | phd, data = bioChemists)

model <- poisson_reg(penalty = 10, mixture = 0.1)
model
update(model, penalty = 1)
update(model, penalty = 1, fresh = TRUE)
Description

Alcohol, Cigarette, and Marijuana Use for High School Seniors

Details

Data are from Table 7.3 of Agresti (2007). The first three columns make up data from a 3-way contingency table.

Value

seniors a tibble

Source

Examples

data(seniors)
str(seniors)

---

tidy.zip Turn zero-inflated model results into a tidy tibble

Description

Turn zero-inflated model results into a tidy tibble

Usage

## S3 method for class 'zeroinfl'
tidy(x, type = "count", ...)

## S3 method for class 'hurdle'
tidy(x, type = "count", ...)

Arguments

x A hurdle or zeroinfl model object.
type A character string for which model coefficients to return: "all", "count", or "zero".
... Not currently used.

Value

A tibble
